ATM CASH WITHDRAWAL SYSTEM

ATM Cash Withdrawal System is a program that simulates how an ATM allows customers to withdraw money from their bank accounts.

The System Management

The ATM Cash Withdrawal System consists of five main functions:

1. **Account Management: Check and manage customer balances.**
2. **Cash Management: Monitor available ATM cash.**
3. **Banknote Calculation: Calculate the required banknotes.**
4. **Transaction Processing: Validate and process withdrawals.**
5. **Balance Updating: Update the account and ATM balances.**

ATM CASH WITHDRAWAL SYSTEM

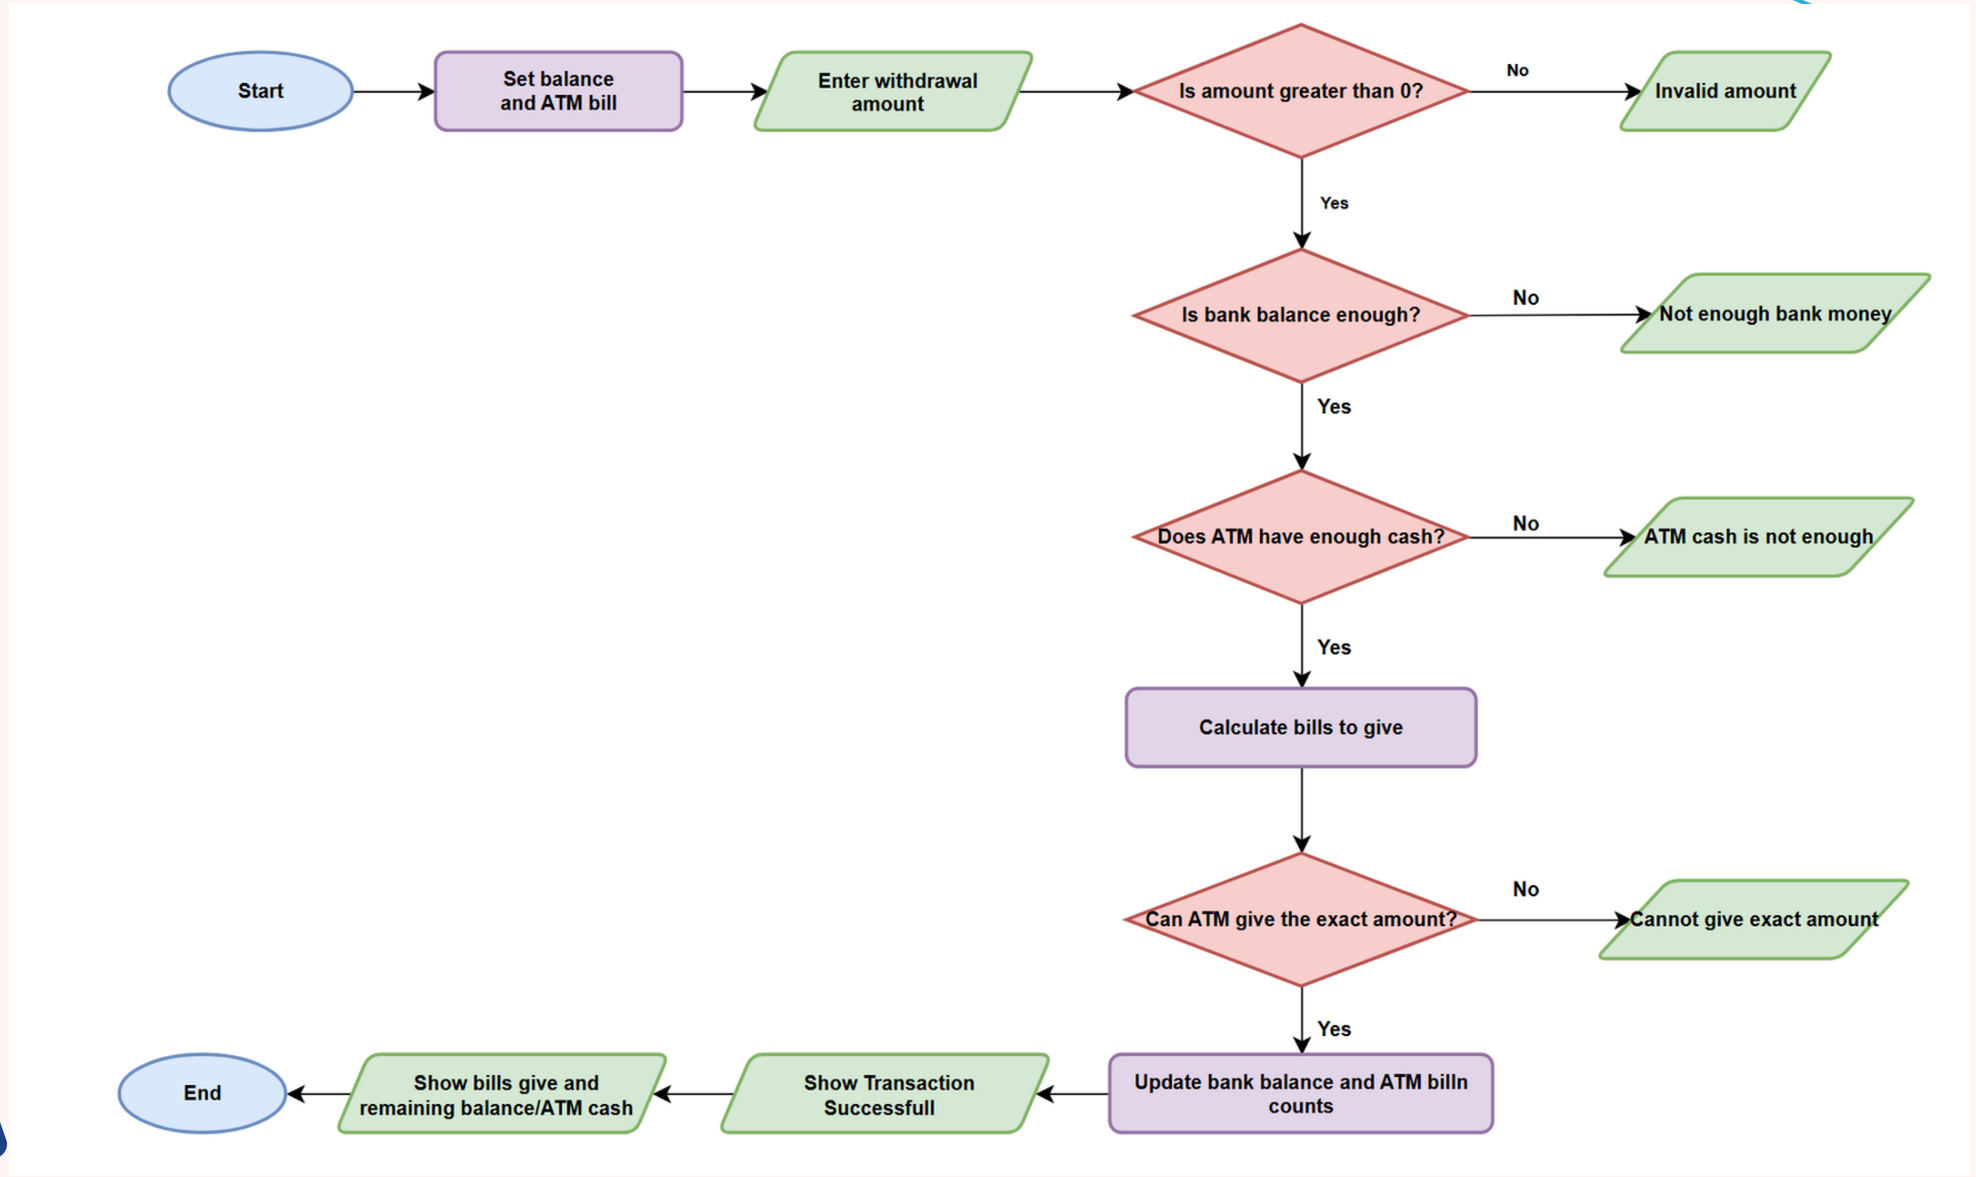

The Main Objective

The main objectives of this project are:

1. **Validate withdrawal amounts against the customer's account balance.**
2. **Calculate the appropriate banknotes for each withdrawal.**
3. **Ensure sufficient cash is available in the ATM.**
4. **Update the account balance and ATM cash after successful transactions.**
5. **Display transaction results and remaining balances.**

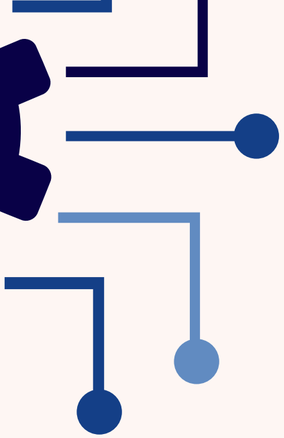

FLOWCHART

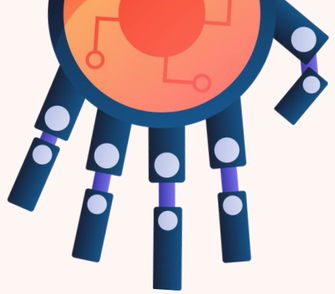

Start
Set balance and ATM bill
Enter withdrawal amount
Is amount greater than 0?
No
Invalid amount
Yes
Is bank balance enough?
No
Not enough bank money
Yes
Does ATM have enough cash?
No
ATM cash is not enough
Yes
Calculate bills to give
Can ATM give the exact amount?
No
Cannot give exact amount
Yes
Update bank balance and ATM billn counts
Show Transaction Successfull
Show bills give and remaining balance/ATM cash
End
